Caracas, Venezuela

SUMMARY

Detail-oriented Electrical Engineer with a strong foundation in power systems, high-voltage infrastructure, and transmission line design. Skilled in utilizing AutoCAD for technical drafting, alongside hands-on expertise in technical simulations, extensive data processing, and infrastructure monitoring. Highly adaptable and quick to learn, with a strong focus on delivering practical, high-quality engineering solutions.

EXPERIENCE

- | | | |
|-----------------|--|--------------------|
| Jan/25 – Feb/26 | STUDY OF REAL-TIME TEMPERATURE ESTIMATION METHODS IN IGBTs AND POWER DIODES.
<i>Capstone Project.</i> | CARACAS, VENEZUELA |
| | <ul style="list-style-type: none">Bridged theoretical research with extensive practical execution, navigating complex laboratory environments to design and assemble advanced test setups and operate specialized measurement equipment.Overcame technical limitations by independently designing, fabricating, and implementing a custom measurement circuit tailored to the project's specific real-time data requirements.Programmed custom scripts for the reading, processing, and visualization of extensive experimental datasets, ensuring accurate data interpretation and validation of theoretical models. | |
| Oct/25 – Jan/26 | CONSORCIO CREDICARD, C.A.
<i>Monitoring Analyst.</i> | CARACAS, VENEZUELA |
| | <ul style="list-style-type: none">Supervised real-time platform operability via custom dashboards, proactively identifying and escalating system anomalies to relevant technical departments.Maintained physical server integrity by routinely auditing cooling systems and electrical backup infrastructure, ensuring maximum uptime for physical payment processing servers. | |
| Mar/21 – May/21 | UNIVERSIDAD ISEP.
<i>Web Developer.</i> | REMOTE, MEXICO |
| | <ul style="list-style-type: none">Developed and implemented custom Odoo modules in Python to automate the capture, organization, and storage of data, significantly improving the efficiency of the lead management workflow.Modernized outdated legacy systems to accommodate company scaling, rewriting code to maximize computing resource efficiency and integrate new functionalities.Troubleshoot and resolved system bugs and real-time contingencies, ensuring continuous platform stability and reliable operation.Produced detailed technical documentation for module integrations and code updates, establishing clear guidelines to facilitate seamless future platform modifications. | |

EDUCATION

- | | | |
|-------------|--|--------------------|
| 2018 - 2026 | UNIVERSIDAD SIMÓN BOLÍVAR (USB)
Electrical Engineering | CARACAS, VENEZUELA |
| | <ul style="list-style-type: none">Academic program focused on power systems, encompassing transmission line design, high-voltage engineering, electrical protection systems, energy conversion, and power electronics. | |

COURSES & CERTIFICATIONS

- Data Analysis with Python – IBM (January 2021).
- Introduction to Power Electronic Converter Design – USB (March 2025).
- High-Voltage Installations and Insulation Studies – USB (March 2025).
- Motor and Critical Load Protection in Industry and Mining using ETAP – Greener Engineering School (March 2025).
- Earthing Systems: Measurement Methods – USB (March 2026).

SKILLS

- Logical thinking and programming skills.
- Technical and analytical computations.
- Conversational English.
- Microsoft Excel (Intermediate).
- AutoCAD (Intermediate).
- ETAP (Intermediate).
- DIgSILENT PowerFactory (Basic).
- PLECS (Advanced).
- Responsible and collaborative team player.
